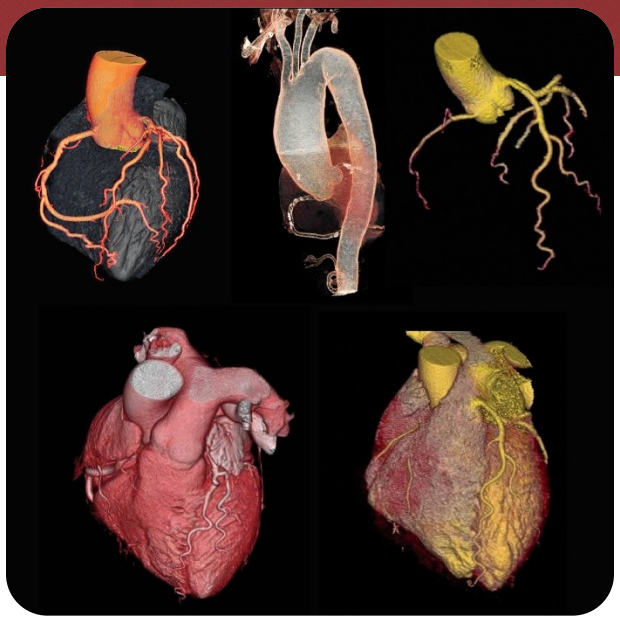
CARDIO IMAGING

SpotLight™ Duo **Pay Per Use** Program

Enhanced cardiac care empowered by a dedicated Cardiac CT scanner at **NO UPFRONT COST**



Starting a Cardiac CT program can be challenging. Even though multiple studies have shown that CT angiography is significantly more accurate diagnostically than myocardial perfusion imaging, Cardiac CT has yet to become the diagnostic test of choice for US healthcare providers.[1,2] How can we increase access to quality care, while also minimizing the costs to deliver that care?

Arineta Cardio Imaging, the innovator behind the SpotLight™ Duo - the world's first dedicated Cardiovascular and Thoracic CT scanner introduces this transformative technology to healthcare providers in the United States at no upfront equipment cost. This allows healthcare providers and administrators to explore firsthand the benefits of a CT-first patient care pathway with minimal capital expenditure.

Arineta
CARDIO IMAGING

Program Details

- No upfront CT scanner cost
- Arineta provides the scanner, injector, workstation, installation, and training
- Service is included
- User responsible for facility, manpower and operational costs

Benefits

Cardiac CT angiography yields 41% lower rate of death or nonfatal myocardial infarction vs standard care, including stress testing[3]

Excellent image quality, including high and unstable heart rates[4]

FFRct acceptance rate up to 100%[4]

Breakeven in as few as four patients per day[5]
